PERSONAL PROJECTS

Cs of CS (08/2021 - 06/2022)
□ I was a member of the Cs of Cs Committee at Heart University for one year, where I actively contributed to various initiatives within the department. As part of the committee.

E-commerce Platform (Full Stack) - (MEVN) (09/2022 - 12/2022)
□ Architected and developed a complete e-commerce solution with Vue.js, featuring both customer-facing storefront and administrative dashboard for product management and order processing
□ Engineered a scalable RESTful API backend with secure authentication, inventory management, and seamless integration between frontend applications

AI-Enhanced Chat Application for Webfume (MEVN) (11/2022 - 12/2022)
□ Developed a chat app for Webfume that integrates the OpenAI API for intelligent responses, automated moderation, and user assistance. Utilized Vue for the front-end and Node.js for the back-end. Enhanced user interaction with advanced AI capabilities.

Faculty Management System (FMS) - Full Stack Web Application (09/2023 - 12/2023)
□ Designed and implemented a comprehensive academic management system featuring automated student registration, department administration, credit-based evaluation, grade management, semester progression tracking, course enrollment, and academic performance monitoring in alignment with university standards
□ Built with Vue.js 3/TypeScript, Pinia for state management, Node.js/Express.js REST API, MySQL database, featuring JWT authentication, role-based access control, and modern development practices including Git version control and automated testing

WC-SAP Product Sync (WordPress) (02/2024 - 03/2024)
□ Developed a WordPress plugin that automates real-time synchronization between SAP Business One and WooCommerce, enabling automated product price and inventory updates through secure REST API integration.
□ Implemented a robust queue management system with configurable cron jobs for batch processing, along with an admin dashboard for monitoring sync status and managing API configurations.

Course Management System(Laravel) (09/2024 - 10/2024)
□ Developed a comprehensive course management system using Laravel and MySQL, featuring course creation, student enrollment, and department management with role-based access control
□ Built a responsive UI using Blade templating engine and JavaScript, implementing dynamic search functionality and automate d reporting system for tracking student registrations and course fees

GPS Tracking Application(Flutter) (10/2024 - 12/2024)
□ Developed a comprehensive GPS tracking application using Flutter that supports real-time location tracking, multilingual interface, and offline functionality. Utilized Google Maps API for visualization and Geolocator for precise positioning.
□ Implemented advanced features including custom map markers, geofencing capabilities, and SMS-based location sharing using Flutter plugins and native platform integration.
□ Created a responsive and intuitive UI with support for multiple languages using easy_localization, following Material Design principles and ensuring cross-platform compatibility.

ISP Management System (Fars Route)(Mevn) (07/2024 - Present)
□ Engineered a comprehensive ISP management platform integrating DeltaSIB and QuickBooks APIs, streamlining operations for 10+ user roles including administrators, sellers, technicians, and cashiers
□ Implemented end-to-end customer lifecycle management from service subscription to installation, featuring automated network provisioning through DeltaSIB integration
□ Developed automated billing and invoicing system with QuickBooks Online integration, enabling seamless financial operations and credit management
□ Built a multi-role access control system managing complex workflows between sales, installation teams, NOC operators, and accounting staff

Telegram Mini App E-commerce (02/2025 - Present)
□ Developed an e-commerce Telegram Mini App using Vue.js and NodeJS, featuring product catalog, cart management, and seamless shopping experience integrated directly within Telegram
□ Implemented secure user authentication using Firebase Phone Authentication and integrated Telegram's WebApp bridge for enhanced platform-native functionality

Freelancing (01/2021 - Present)
□ In my three years freelancing as a web and mobile developer, I've worked with Flutter, Vue.js, React, Node.js, and WordPress. I've tackled different projects, from mobile apps to website designs, using these technologies. Adapting to each client's needs, I've honed my skills and stayed updated with the latest trends.
